

The Plum Guide frontend task (CSS)

For this task we would like you create a responsive layout.

- You will find an attached Sketch file
- This contains a responsive layout for mobile, tablet and desktop
- Using tools of your choice, kindly recreate this
- Ideally we would like to see the usage of CSS preprocessor (Sass/Less/etc)
- Use build tools of your choice
- Ensure your project can be viewed locally in a browser and include instruction how to do so
- Ensure browser compatibility for modern versions of:
 - Chrome (desktop and mobile)
 - Safari (desktop and mobile)
 - IE 11

Please submit your project by sharing a git repository. We'd like to view your commits.
